Bow Top Range

Developed as an alternative to our Vertical bar range making it an ideal option for minimum security applications is our **Bow Top** range of fencing systems. It has been designed to offer strength, rigidity and durability in one product configuration to define boundaries and deter pedestrians.

The fence panel is secured to the support post by a tamper resistant pin, to reduce interference and vandalism on the fence line. The secure fixing makes the product a favoured and cost effective solution; enhancing the environment in community projects and housing schemes.

Popular in the larger heights for use around the perimeters of public car parks and gardens where appearance is of high priority. Lower heights are popular in segregating children's play areas or to maintain an area free of animals.

Bow Top Range

Bow Top can offer the chosen solution for Parks and Play areas where wall mounting is advantageous. The use of brick walls not only supply additional height, the choice of brick can compliment the fence range with a stylish and modern appearance.

Panels are supplied in standard 2.75m centres between posts and in heights up to 2.4m. materials are selected to compliment the height and style of the fence, typically 12mm diameter at 1.2m high & 22mm at 2.4m high, but this can be specified by the client at the time of order.

Supplied Galvanised to BSEN ISO 1461, with optional powder coating in any RAL colour
