

Estate & Rural Fencing

◆Continuous Bar

Designed as an economic boundary demarcation for parks and estates its solid steel construction offers many years of effective life.

Of attractive appearance but with a low visual impact on the surrounding environment Continuous bar railing is used to provide containment for animals and to act as a boundary demarcation.

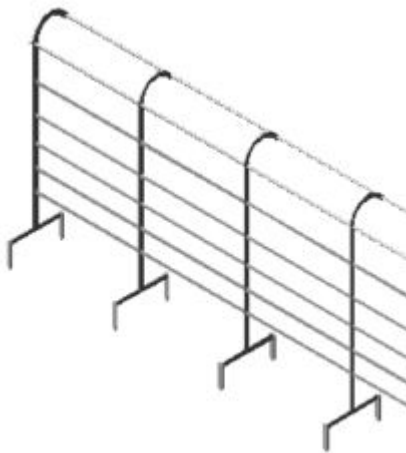

Widely used around the turn of the century and now finding renewed favour in the countryside.

◆Construction

The fencing is constructed in 5.0 m lengths from round and flat steel bar horizontals with strong flat bar posts.

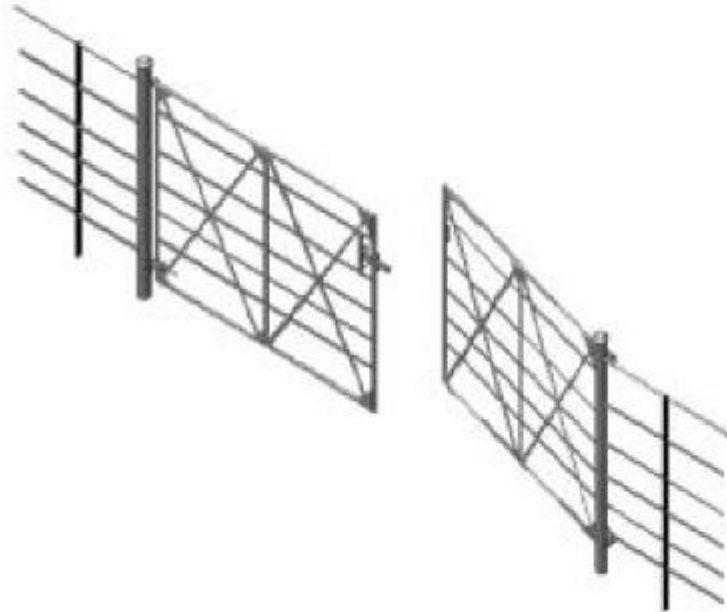

The design allows the horizontals to overlap and lock into place thus creating an unbroken fence line.

Benefiting from the use of modern materials and finishing methods, the fencing still retains the attractive appearance produced by the master craftsmen of the bygone era, whilst offering a long life span with minimal maintenance.

◆Gates

Paramount offer a range of gates to match this fencing, with double, single, Kissing and contiguous gates available to order.

◆Uses

Paramount Continuous bar has been used to enhance:

- Parks
- Recreation areas
- Farm and Estate boundaries

◆Finish

Hot dip galvanised to BS EN ISO 1461 after the fabrication process has been completed to ensure complete protection.

Polyester Powder coating can also be specified with a choice of over 100 RAL and British Standard colours. The utilisation of architectural grade polyester powder provides a pleasing appearance with additional protection to the galvanised substrate. Powder coated to BS 1722 part 16 or BS 6497 where specified by the client.
